

SIRE 2.0 – Negative Observation Module Explanation

Version 1.0

April 2022

The SIRE 2.0 Negative Observation Module and the Classification of Subject of Concern (SOC) and Nature of Concern (NOC)

Introduction	2
SOC and NOC	2
Hardware	4
Process	5
Human	6
Annex 1: Hardware – Standard Classification Coding	7
Annex 2: Process - TMSA-based classification coding	10
Annex 3: Human - Rank grouping	22
Annex 4: Standard photograph locations	23
Annex 5: Hardware – Standard cause analysis tree	25
Annex 6: Process – Standard cause analysis tree	26
Annex 7: Human - Performance Influencing Factors (PIF)	27
Annex 8: Photograph comparison – Standard cause analysis tree	28

Document Control

Doc Version	Date	Change
1.0	27 April 2022	Initial release

Introduction

Any deficiency, defect or non-compliance identified during a SIRE 2.0 inspection must be recorded in the Inspection Editor as a negative observation in the Negative Observation Module which is identified by this symbol:

For example, consider the case where, when answering Qu. 5.2.10

"Were the Master, officers and ratings familiar with the purpose and operation of the vessel's deck foam system, including portable applicators, and was the system in good working order and available for immediate use, with operating instructions displayed at the control station?"

The inspector observes that:

- a) The isolating valves for the deck foam line are seized open.
- b) Although the deck foam system is included in the PMS, there are no inspection/maintenance tasks for the isolating valves.
- c) The accompanying officer does not know the location and purpose of the isolating valves.

To allow effective data mining of SIRE 2.0 inspection reports, this information must be recorded in a systematic manner.

SOC and NOC

Firstly, what is being reported on must be identified. This is termed the Subject of Concern (SOC).

In the case of Hardware, this means the deficient vessel structure, machinery, outfitting or equipment, identified through the standard classification coding. (See Annex 1)

In the case of Process, this means the deficient procedure and/or document, identified through the TMSAbased classification coding. (See Annex 2)

For Human, this means the rank grouping of the Observed Person (OP) or Responsible Team (RT). (See Annex 3)

Note that the Human Response Tool requires identification of the SOC, the rank grouping, for all responses, not only in the Negative Response Module.

For Photograph Comparison, it means the location of the standard photograph (See Annex 4).

Secondly, what has been observed must be identified. This is termed the Nature of Concern (NOC).

In the case of Hardware, this is identified through the standard hardware cause analysis tree. (See Annex 5)

In the case of Process, this is identified through the standard process cause analysis tree (see Annex 6).

For Human, this is identified by one or more Performance Influencing Factors (PIF) (see Annex 7).

Note that the Human Response Tool requires the identification of the NOC, i.e., one or more PIFs, and a supporting comment for "Exceeded Normal Expectation" and "Largely as Expected" responses, as well as in the Negative Response Module.

For Photograph Comparison, this is identified through the *standard photograph comparison cause analysis tree* (See Annex 8)

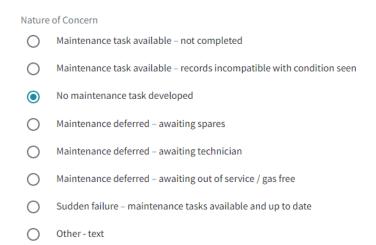

Thirdly, a negative comment should be recorded, describing **the observed conditions in detail**, amplifying the coding already entered.

Hardware

Taking the example above, the Hardware SOC would be identified as "Fire Fighting Systems - Foam"

The Hardware NOC would be identified as "No maintenance task developed"

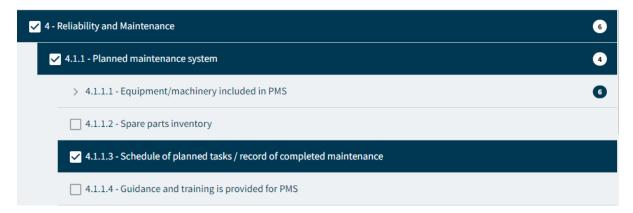

The supporting Negative Comment would be:

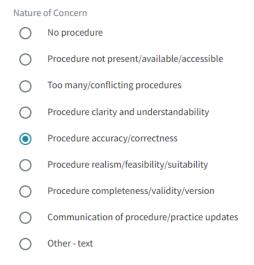

"The isolating valves for the deck foam line were seized open."

Process

The Process SOC would be identified as "4.1.1.3 Schedule of planned tasks/record of completed maintenance".

The Process NOC would be identified as (Procedure accuracy/correctness).

The supporting Negative Comment would be:

"The deck foam fire-fighting system was included in the vessel's PMS, but there was no task created for the inspection and maintenance of the deck foam line isolating valves."

Human

The Human SOC would be identified as appropriate from the options listed.

Please select a crew rank
Not Identified
Senior Deck Officer
Junior Deck Officer
Senior Engineer Officer
Junior Engineer Officer
Rating

The Human NOC might be recorded as 1. Recognition of safety criticality of the task or associated steps and 3. Procedures accessible, helpful, understood, and accurate for the task.

Nature	of Concern
~	1. Recognition of Safety criticality of the task or associated steps
	2. Custom and practice surrounding use of procedures
~	3. Procedures accessible, helpful, understood and accurate for task
	4. Team dynamics, communications and coordination with others
	5. Evidence of stress, workload, fatigue, time constraints
	6. Factors such as morale, motivation, nervousness
	7. Workplace ergonomics incl. signage, tools, layout, space, noise, light, heat, etc.
	8. Human-Machine Interface (E.g.: Controls, Alarms, etc.)
	9. Opportunity to learn or practice
	10. Not Identified

The supporting Negative Comment would be:

"The OP was not familiar with the location or purpose of the isolating valves in the deck foam line."

Annex 1: Hardware - Standard Classification Coding

The Standard Classification Coding is widely used in the industry to identify vessel components, for example, in planned maintenance and purchasing systems.

The SOC must be identified with one of the Level 3 Descriptions.

Annex 2: Process - TMSA-based classification coding

The TMSA-based classification coding has been developed specifically for SIRE 2.0 to allow a connection to be made between SIRE 2.0 observations and TMSA KPIs for data analysis purposes.

The classification coding is based on TMSA KPIs and BPG which may be pertinent to the physical ship inspection process. 4B: Machinery Space Management is a construct for the SIRE 2.0 process and is not included in TMSA3.

The SOC must be selected from the appropriate Level 2, 3 or 4 options.

4B - Machinery space management	4B.1.1 - Procedures to ensure effective machinery	4B.1.1.2.2 - Circumstances under which	
	space management	unmanned mode is prohibited	
4B - Machinery space management	4B.1.1 - Procedures to ensure effective machinery space management	4B.1.1.2.3 - Maximum permitted period of continuously unmanned mode	
4B - Machinery space management	4B.1.1 - Procedures to ensure effective machinery	4B.1.1.2.4 - Checks and inspections before	
	space management	unmanned period	
4B - Machinery space management	48.1.1 - Procedures to ensure effective machinery space management	4B.1.1.2.5 - Records that must be maintained	
4B - Machinery space management	4B.1.1 - Procedures to ensure effective machinery		
7.1	space management 48.1.1 - Procedures to ensure effective machinery	department before/during UMS periods	
4B - Machinery space management	space management	orders	
4B - Machinery space management	4B.1.2 - Machinery space resource management	4B.1.2.1 - Machinery manning levels	
4B - Machinery space management	4B.1.2 - Machinery space resource management	4B.1.2.2 - Calling the Chief Engineer	
+p - wacninery space management	4B.1.2 - Machinery space resource management	4B.1.2.3 - Handovers	
4B - Machinery space management 4B - Machinery space management	4B.1.2 - Machinery space resource management 4B.1.2 - Machinery space resource management	4B.1.2.4 - Lengthy periods with increased	
4B - Machinery space management	4B.1.2 - Machinery space resource management	4B.1.2.4 - Lengthy periods with increased machinery space manning	
	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery	4B.1.2.4 - Lengthy periods with increased	
4B - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.3 - Pre-operational tests of	4B.1.2.4 - Lengthy periods with increased machinery space manning	
4B - Machinery space management 4B - Machinery space management 4B - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery	4B.1.2.4 - Lengthy periods with increased machinery space manning 4B.1.3.1 - Equipment that must be tested	
4B - Machinery space management 4B - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.3 - Pre-operational tests of manouvering/cargo machinery	4B.1.2.4 - Lengthy periods with increased machinery space manning 4B.1.3.1 - Equipment that must be tested 4B.1.3.2 - Records that must be maintained	
48 - Machinery space management 48 - Machinery space management 48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.3 - Pre-operational tests of manouvering/cargo machinery	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing	
48 - Machinery space management 48 - Machinery space management 48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.3 - Pre-operational tests of	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before	
48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.3 - Pre-operational tests of manouvering/cargo machinery	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing	48.1.4.1.1 - That restrict ability to move
4B - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service	under own power
48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery	under own power 4B.1.4.1.2 - That reduces power
48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service	under own power 48.1.4.1.2 - That reduces power generation capacity 48.1.4.1.3 - That reduces the cargo
48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of machinery while in service	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service	under own power 4B.1.4.1.2 - That reduces power generation capacity
48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service	under own power 48.1.4.1.2 - That reduces power generation capacity 48.1.4.1.3 - That reduces the cargo
48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.5 - Contingency plans for breakdowns of manouvering machinery 48.1.5 - Contingency plans for breakdowns of	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.5.1 - Isolating a single unit within the main	under own power 48.1.4.1.2 - That reduces power generation capacity 48.1.4.1.3 - That reduces the cargo
48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.5.1 - Isolating a single unit within the main engine	under own power 48.1.4.1.2 - That reduces power generation capacity 48.1.4.1.3 - That reduces the cargo
4B - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.5 - Contingency plans for breakdowns of manouvering machinery 48.1.5 - Contingency plans for breakdowns of	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.5.1 - Isolating a single unit within the main engine	under own power 48.1.4.1.2 - That reduces power generation capacity 48.1.4.1.3 - That reduces the cargo
4B - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.5 - Planning large scale overhaul of machinery while in service 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.5.1 - Isolating a single unit within the main engine 48.1.5.2 - Immobilising the propellor shaft 48.1.5.3 - Operating with reduced power or manoeuvrability 48.1.6.1 - Machinery to be considered	under own power 48.1.4.1.2 - That reduces power generation capacity 48.1.4.1.3 - That reduces the cargo loading/discharging capabilities
48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Minimum machinery that must be in operation and on standby	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.5.1 - Isolating a single unit within the main engine 48.1.5.2 - Immobilising the propellor shaft 48.1.5.3 - Operating with reduced power or manoeuvrability 48.1.6.1 - Machinery to be considered propulsion/steering/power/thrusters	under own power 48.1.4.1.2 - That reduces power generation capacity 48.1.4.1.3 - That reduces the cargo loading/discharging capabilities 48.1.6.1.1 - During open ocean passages
48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.5.1 - Isolating a single unit within the main engine 48.1.5.2 - Immobilising the propellor shaft 48.1.5.3 - Operating with reduced power or manoeuvrability 48.1.6.1 - Machinery to be considered propulsion/steering/power/thrusters	under own power 48.1.4.1.2 - That reduces power generation capacity 48.1.4.1.3 - That reduces the cargo loading/discharging capabilities
48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.5.1 - Isolating a single unit within the main engine 48.1.5.2 - Immobilising the propellor shaft 48.1.5.3 - Operating with reduced power or manoeuvrability 48.1.6.1 - Machinery to be considered propulsion/steering/power/thrusters 48.1.6.1 - Machinery to be considered propulsion/steering/power/thrusters 48.1.6.1 - Machinery to be considered	under own power 48.1.4.1.2 - That reduces power generation capacity 48.1.4.1.3 - That reduces the cargo loading/discharging capabilities 48.1.6.1.1 - During open ocean passages
48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.5.1 - Isolating a single unit within the main engine 48.1.5.2 - Immobilising the propellor shaft 48.1.5.3 - Operating with reduced power or manoeuvrability 48.1.6.1 - Machinery to be considered propulsion/steering/power/thrusters	under own power 48.1.4.1.2 - That reduces power generation capacity 48.1.4.1.3 - That reduces the cargo loading/discharging capabilities 48.1.6.1.1 - During open ocean passages 48.1.6.1.2 - During coastal navigation
48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.5 - Contingency plans for breakdowns of manouvering machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.5.1 - Isolating a single unit within the main engine 48.1.5.2 - Immobilising the propellor shaft 48.1.5.3 - Operating with reduced power or manoeuvrability 48.1.6.1 - Machinery to be considered propulsion/steering/power/thrusters	under own power 48.1.4.1.2 - That reduces power generation capacity 48.1.4.1.3 - That reduces the cargo loading/discharging capabilities 48.1.6.1.1 - During open ocean passages 48.1.6.1.2 - During coastal navigation 48.1.6.1.3 - During port entry 48.1.6.1.4 - During manoeuvring alongside
48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Instructions around machinery maintenance while in service 48.1.5.1 - Isolating a single unit within the main engine 48.1.5.2 - Immobilising the propellor shaft 48.1.5.3 - Operating with reduced power or manoeuvrability 48.1.6.1 - Machinery to be considered propulsion/steering/power/thrusters 48.1.6.1 - Machinery to be considered	under own power 48.1.4.1.2 - That reduces power generation capacity 48.1.4.1.3 - That reduces the cargo loading/discharging capabilities 48.1.6.1.1 - During open ocean passages 48.1.6.1.2 - During coastal navigation 48.1.6.1.3 - During port entry 48.1.6.1.4 - During manoeuvring alongside 48.1.6.1.5 - During moring operations
48 - Machinery space management	48.1.2 - Machinery space resource management 48.1.3 - Pre-operational tests of manouvering/cargo machinery 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.4 - Planning large scale overhaul of machinery while in service 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Contingency plans for breakdowns of manoeuvring machinery 48.1.5 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby 48.1.6 - Minimum machinery that must be in operation and on standby	48.1.2.4 - Lengthy periods with increased machinery space manning 48.1.3.1 - Equipment that must be tested 48.1.3.2 - Records that must be maintained 48.1.3.3 - Communications with other departments during testing 48.1.3.4 - Testing main propulsion units before departing a berth 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.4.1 - Restrictions around machinery maintenance while in service 48.1.5.1 - Isolating a single unit within the main engine 48.1.5.2 - Immobilising the propellor shaft 48.1.5.3 - Operating with reduced power or manoeuvrability 48.1.6.1 - Machinery to be considered propulsion/steering/power/thrusters	under own power 48.1.4.1.2 - That reduces power generation capacity 48.1.4.1.3 - That reduces the cargo loading/discharging capabilities 48.1.6.1.1 - During open ocean passages 48.1.6.1.2 - During coastal navigation 48.1.6.1.3 - During port entry 48.1.6.1.4 - During manoeuvring alongside

6A - Mooring and Anchoring Operations	6A.2.4 - Procedures are in place for the inspection, maintenance and replacement of wires, ropes talk and appliance equipment.	6A.2.4.2.1 - The records may include date of bringing rope/wires into service
	wires, ropes, tails and ancillary equipment	
6A - Mooring and Anchoring Operations	6A.2.4 - Procedures are in place for the inspection, maintenance and replacement of wires, ropes, tails and ancillary equipment	6A.2.4.2.2 - The records may include identification and tagging of all equipment
6A - Mooring and Anchoring Operations	6A.2.4 - Procedures are in place for the inspection, maintenance and replacement of wires, ropes, tails and ancillary equipment	6A.2.4.2.3 - The records may include certification for all ropes/wires/tails/joining shackles
6A - Mooring and Anchoring Operations	6A.2.4 - Procedures are in place for the inspection, maintenance and replacement of wires, ropes, tails and ancillary equipment	6A.2.4.2.4 - The records may include dates of end for ending
6A - Mooring and Anchoring Operations	6A.3.1 - Requirements for personnel involved in mooring operations	6A.3.1.1.1 - The requirements may include designated person in charge at each location
6A - Mooring and Anchoring Operations	6A.3.1 - Requirements for personnel involved in mooring operations	6.A.3.1.1.2 - The requirements may include minimum numbers of personnel required at each location
6A - Mooring and Anchoring Operations	6A.3.1 - Requirements for personnel involved in mooring operations	6A.3.1.1.3 - The requirements may include toolbox talk prior to mooring operations
6A - Mooring and Anchoring Operations	6A.3.1 - Requirements for personnel involved in mooring operations	6A.3.1.1.4 - The requirements may include minimum training and experience requirements
6A - Mooring and Anchoring Operations	6A.3.1 - Requirements for personnel involved in mooring operations	6A.3.1.1.5 - The requirements may include supervision of third party personnel
6A - Mooring and Anchoring Operations	6A.4.3 - Comprehensive audit uses observation of mooring operations	6A.4.3.1 - All fleet vessels are audited annually
6A - Mooring and Anchoring Operations	6A.4.3 - Comprehensive audit uses observation of mooring operations	6A.4.3.3 - The audit is followed by a report
7 - Management of change	7.1.1 - Documented procedure for MOC	7.1.1.1 - Addresses permanent and temporary changes
7 - Management of change	7.1.1 - Documented procedure for MOC	$7.1.1.2.1 - \text{These may include installation of new} \\$ and modification of existing equipment
7 - Management of change	7.1.1 - Documented procedure for MOC	7.1.1.2.2 - These may include temporary isolation and reactivation of alarms
7 - Management of change	7.1.1 - Documented procedure for MOC	7.1.1.2.3 - These may include changes and/or upgrades to software
8 - Incident Reporting, Investigation and Analysis	8.1.1 - Prompt reporting and investigation of incidents	8.1.1.1.1 - Procedures may include definitions of reportable incidents
8 - Incident Reporting, Investigation and Analysis	8.1.1 - Prompt reporting and investigation of incidents	8.1.1.1.2 - Procedures may include person/department responsible for investigation
8 - Incident Reporting, Investigation and Analysis	8.1.1 - Prompt reporting and investigation of incidents	8.1.1.1.3 - Procedures may include description of the investigation process
8 - Incident Reporting, Investigation and Analysis	8.1.2 - Mandatory notifications are carried out	8.1.2.1.1 - Mandatory reports include notifications to company DPA/CSO
8 - Incident Reporting, Investigation and Analysis	8.1.2 - Mandatory notifications are carried out	8.1.2.1.2 - Mandatory reports include notifications to Flag State
8 - Incident Reporting, Investigation and Analysis	8.1.2 - Mandatory notifications are carried out	8.1.2.1.3 - Mandatory reports include notifications to Coastal Authorities and/or Port State
8 - Incident Reporting, Investigation and Analysis	8.1.2 - Mandatory notifications are carried out	8.1.2.1.4 - Mandatory reports include notifications to Classification Society
8 - Incident Reporting, Investigation and Analysis	8.1.2 - Mandatory notifications are carried out	8.1.2.1.5 - Mandatory reports include
8 - Incident Reporting, Investigation and Analysis		notifications to Qualified Individual, if applicable 8.1.4.1 - Corrective and preventative actions are
8 - Incident Reporting, Investigation and Analysis		identified 8.1.4.2 - Investigation and analysis accurately
9 - Safety Management - Shore	9.1.3 - Documented risk assessment system	establish the root causes 9.1.3.1 - Identify hazards and assess risk levels
9 - Safety Management - Shore	9.1.4 - Permit to work system	arising from work 9.1.4.1 - Permit to work is used to control risks
9 - Safety Management - Shore	9.1.4 - Permit to work system	associated with hazardous tasks 9.1.4.2 - Management approval for higher risk
9 - Safety Management - Shore	9.2.1 - Risk assessments are used to develop safe	
9 - Safety Management - Shore	working procedures 9.2.1 - Risk assessments are used to develop safe	
9 - Safety Management - Shore	working procedures 9.2.1 - Risk assessments are used to develop safe	
9 - Safety Management - Shore	working procedures 9.2.2 - Risk assessing new, non-routine and	updated 9.2.2.1 - Where no safe work procedure, risk
9 - Safety Management - Shore	unplanned tasks 9.2.2 - Risk assessing new, non-routine and	assessment carried out and approved 9.2.2.2 - Alternative methods of work considered
9 - Safety Management - Shore		and documented 9.2.3.1 - Risk assessments are assessed by shore-
9 - Safety Management - Shore	unplanned tasks are available 9.2.3 - Risk assessments for new, non-routine and	
	unplanned tasks are available	of risk assessments

I.		
9 - Safety Management - Shore	9.2.4 - All mitigation measures completed prior work	9.2.4.1.1 - Procedures may include permit to work system for both planned and unplanned tasks
9 - Safety Management - Shore	9.2.4 - All mitigation measures completed prior work	9.2.4.1.2 - Procedures may include risk assessment form to confirm implementation
9 - Safety Management - Shore	9.2.4 - All mitigation measures completed prior work	9.2.4.2 - Final approval subject to implementation of mitigation measures
9 - Safety Management - Shore	9.2.5 - Procedures manage the safety of contractors	9.2.5.1 - Define and identify contractors
9 - Safety Management - Shore	9.2.5 - Procedures manage the safety of contractors	9.2.5.2 - Establish responsibilities between contractors and vessel
9 - Safety Management - Shore	9.2.5 - Procedures manage the safety of contractors	9.2.5.3 - Safety inductions are conducted with
9 - Safety Management - Shore	9.2.5 - Procedures manage the safety of	9.2.5.4 - Establish work management process
9 - Safety Management - Shore	9.2.5 - Procedures manage the safety of	9.2.5.5 - Ensure compliance with company HSSE
9 - Safety Management - Shore	9.3.2 - Propriety safety tools are used to	policies 9.3.2.1.1 - Such tools may include Unsafe Act
9 - Safety Management - Shore	encourage hazard identification 9.3.2 - Propriety safety tools are used to	Awareness programmes 9.3.2.1.2 - Such tools may include behaviour-
9 - Safety Management - Shore	encourage hazard identification 9.3.2 - Propriety safety tools are used to	based safety system. 9.3.2.1.3 - Such tools may include concentrated
	encourage hazard identification 9.3.2 - Propriety safety tools are used to	safety awareness campaigns 9.3.2.2 - Campaigns encourage a strong safety
9 - Safety Management - Shore	encourage hazard identification 9A.1.1 - Safety inspections by the designated	culture 9A.1.1.1.1-Identify hazards and potential
9A - Safety Management - Fleet	safety officer 9A.1.1 - Safety inspections by the designated	9A.1.1.2 - Include all accessible areas of the
9A - Safety Management - Fleet	safety officer	9A.1.1.1.3 - Recorded and reviewed at the
9A - Safety Management - Fleet	9A.1.1 - Safety inspections by the designated safety officer	monthly safety meeting
9A - Safety Management - Fleet	9A.1.1 - Safety inspections by the designated safety officer	9A.1.1.2 - Frequency and format of the inspections
9A - Safety Management - Fleet	9A.1.1 - Safety inspections by the designated safety officer	9A.1.1.3 - Safety officer is suitably experienced and trained
9A - Safety Management - Fleet	9A.1.2 - All personnel identify, report, (address) hazards	9A.1.2.1 - Any identified hazards are addressed
9A - Safety Management - Fleet	9A.1.3 - Safety meetings are held at least monthly	9A.1.3.1 - Attended by all available personnel and minutes recorded
9A - Safety Management - Fleet	9A.1.3 - Safety meetings are held at least monthly	9A.1.3.2 - Forum which encourages personnel to actively participate
9A - Safety Management - Fleet	9A.1.3 - Safety meetings are held at least monthly	9A.1.3.3.1 - The safety meeting is used to raise safety awareness
9A - Safety Management - Fleet	9A.1.3 - Safety meetings are held at least monthly	9A.1.3.3.2 - The safety meeting is used to voice safety concerns and identify remedial actions
9A - Safety Management - Fleet	9A.1.3 - Safety meetings are held at least monthly	9A.1.3.3.3 - The safety meeting is used to promulgate lessons learnt
9A - Safety Management - Fleet	9A.1.3 - Safety meetings are held at least monthly	94 1 3 4 - Company reviews and responds to
9A - Safety Management - Fleet	9A.1.4 - Procedures require daily work planning meetings	Salety intering inflates 9A.1.4.1.1 Work planning agrees the scope of the work to be undertaken
9A - Safety Management - Fleet	9A.1.4 - Procedures require daily work planning	9A.1.4.1.2 - Work planning identifies any
9A - Safety Management - Fleet	9A.1.4 - Procedures require daily work planning	operational or departmental conflict 9A.1.4.1.3 - Work planning identifies personnel
	meetings	requirements
9A - Safety Management - Fleet	9A.1.4 - Procedures require daily work planning meetings	9A.1.4.1.4 - Work planning identifies tools and equipment required
9A - Safety Management - Fleet	9A.1.4 - Procedures require daily work planning	9A.1.4.1.5 - Work planning establishes
9A - Safety Management - Fleet	9A.1.4 - Procedures require daily work planning	appropriate PPE requirements 9A.1.4.1.6 - Work planning ensures compliance
· -	meetings 9A.2.1 - Intervention to prevent unsafe acts and	with work and rest hours 9A.2.1.1.1 - Safety intervention techniques used
9A - Safety Management - Fleet	unsafe conditions	may include unsafe Act Awareness and intervention
9A - Safety Management - Fleet	9A.2.1 - Intervention to prevent unsafe acts and unsafe conditions	9A.2.1.1.2 - Safety intervention techniques used may include stop work authority
9A - Safety Management - Fleet	9A.2.1 - Intervention to prevent unsafe acts and unsafe conditions	9A.2.1.1.3 - Safety intervention techniques used may include tool box talks
9A - Safety Management - Fleet	9A.2.1 - Intervention to prevent unsafe acts and unsafe conditions	9A.2.1.1.4 - Safety intervention techniques used may include safety observations
9A - Safety Management - Fleet	9A.2.1 - Intervention to prevent unsafe acts and unsafe conditions	9A.2.1.1.5 - Safety intervention techniques used may include progress is reviewed at monthly safety meetings
9A - Safety Management - Fleet	9A.2.2 - Training in hazard identification is provided to vessel personnel	9A.2.2.1 - Various levels of training are provided

Engine room team task - historical

Annex 4: Standard photograph locations

	All Tankara
	All Tankers
1	Bow area from dead ahead
2	Hull forward end starboard side
3	Hull forward end port side
4	Hull aft end starboard side
5	Hull aft end port side
6	Transom from right astern
7	Forecastle port side looking towards fairleads
8	Forecastle starboard side looking towards fairleads
9	Port or starboard windlass
10	Forward main deck showing condition of deck (and external framing)
11	Forward main deck showing condition of pipe rack
12	One mooring winch including the brake setting arrangement
13	One hose crane with an overall view
14	One hose crane showing hoisting winch, stowed wire and limit switches.
15	Starboard manifold looking from aft to forward
16	Starboard manifold looking forward to aft
17	Aft main deck showing condition of deck (and external framing)
18	Aft main deck showing condition of pipe rack
19	Poop deck looking from midships to starboard including fairleads
20	Aft emergency towing equipment storage arrangement
21	Aft emergency towing equipment deployment system
22	Lifeboat and davit
23	The emergency generator or accumulator batteries
24	Engine room general view showing top of main engine
25	One generator engine
26	The oil filtering equipment
27	The incinerator
28	One boiler from the front
29	One boiler from the top showing control equipment
30	Purifier room general view
31	Main engine side showing local control station
32	Steering gear room general view showing access
33	Main steering gear
	Crude/Product/Chemical tankers/OBO
40	IG system pressure/vacuum-breaking (P/V) device
41	IG system first non-return device (deck seal or double block and bleed arrangement)
42	One main cargo pump and, if in pump room, including bilges
	LNG Membrane Type
50	Cargo tank liquid dome including load and discharge valve
51	Electric motors for deepwell pumps
52	Compressor/motor room
J <u>L</u>	LNG Moss Type
60	Cargo tank liquid dome including load and discharge valve
61	Electric motors for deepwell pumps
62	Electric motors for deepwell pumps
70	LPG Pressurised
70	Cargo tank liquid dome including load and discharge valve
71	Cargo tank vapour dome including cargo system relief valves
72	Compressor house, internal view

	LPG Refrigerated
80	Cargo tank liquid dome including load and discharge valve
81	General view of one Moss sphere
82	Compressor house internal view
	Shuttle Tanker
90	Bow mooring arrangement from forward looking aft showing chain stopper
91	Bow mooring arrangement from aft looking forward showing winch
92	General view of hose connection area
93	Hose coupling arrangement
94	General view forward bow thruster room
95	Forward bow thruster room showing one azimuth thruster

Annex 5: Hardware - Standard cause analysis tree

vature of Concern		
\circ	Maintenance task available – not completed	
\circ	Maintenance task available – records incompatible with condition seen	
\circ	No maintenance task developed	
\circ	Maintenance deferred – awaiting spares	
\circ	Maintenance deferred – awaiting technician	
\circ	Maintenance deferred – awaiting out of service / gas free	
\circ	Sudden failure – maintenance tasks available and up to date	
\circ	Other - text	

Annex 6: Process - Standard cause analysis tree

Nature of Concern		
0	No procedure	
0	Procedure not present/available/accessible	
0	Too many/conflicting procedures	
0	Procedure clarity and understandability	
0	Procedure accuracy/correctness	
0	Procedure realism/feasibility/suitability	
0	Procedure completeness/validity/version	
0	Communication of procedure/practice updates	
\circ	Other - text	

Not Identified

Annex 7: Human - Performance Influencing Factors (PIF)

Nature of Concern		
	1. Recognition of Safety criticality of the task or associated steps	
	2. Custom and practice surrounding use of procedures	
	3. Procedures accessible, helpful, understood and accurate for task	
	4. Team dynamics, communications and coordination with others	
	5. Evidence of stress, workload, fatigue, time constraints	
	6. Factors such as morale, motivation, nervousness	
	7. Workplace ergonomics incl. signage, tools, layout, space, noise, light, heat, etc.	
	8. Human-Machine Interface (E.g.: Controls, Alarms, etc.)	
	9. Opportunity to learn or practice	

Annex 8: Photograph comparison – Standard cause analysis tree

Nature of Concern		
\circ	Area/item shown recently upgraded – maintenance programme in progress	
0	Area/item shown recently upgraded – no evidence of on-going maintenance plan	
0	Area/item shown not representative of the overall condition	
\bigcirc	Other - Text
